

Review for Test 5

1 Law, Regulation, Policy

1.1 Privacy

- Consent
- Surveillance
- Storage
- OECD privacy framework
- GDPR

1.2 US

- Depends on various sectors
- Federal Trade Commission (FTC): Fair Credit Reporting Act, Equal Credit Opportunity Act

1.3 Canada

- Privacy Act
- PIPEDA
- Health Information Act
- Provincial laws
- Directive on Automated Decision Making (DADM)
- Bill C-27
 - Consumer Privacy Protection Act (CPPA)
 - Personal Information and Data Protection Tribunal Act (PIDPTA)
 - Artificial Intelligence and Data Act (AIDA)

2 Transparency, Explainability

1. Build ML models that are explainable by design
2. Build explainability models on top of ML models.

Build explainable models: mostly local

- Local Interpretable model Agnostic Explanations (LIME)

- SHapley Additive exPlanations (SHAP)
 - inconsistency: small change locally may lead to different explanations
 - for high dimensional data and complex models, local linear models may be too simplified.
 - global patterns are overlooked.
 - (SHAP) computationally expensive

3 AI and Indigenous principles

- First Nations OCAP Principles
- what is it
- why was it needed
- how non-indigenous people should approach it.

4 Guest Lectures

1. Kristan Cook: Life of a Privacy Officer
 - archival, storage
 - respond to FOI requests
 - accountable for organization's compliance
2. Ross Mitchell. AI and Health
 -
